C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otilis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1999-357842/30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chlamydia pneumoniae

The present sequence is the 98kDa putative outer membrane protein from Chlamydia pneumoniae. The genomic sequence was amplified using two PCR primers. The 5' primer contains a NotI restriction site, a ribosome binding site, an initiation codon and a sequence close to the 5' end of the 98kDa putative outer membrane protein coding sequence. The 3' primer contains the sequence encoding the C-terminal sequence of the putative outer membrane protein and a BarGl restriction site. The stop codon was excluded and an additional nucleotide was inserted to obtain an in-frame C-terminal fusion with the Histidine tag. The PCR product was cloned into a eukaryotic expression vector (pCA-Myc-His) by restricting both the vector and the PCR product with NotI and BamHl and performing a ligation reaction. This expression vector was injected intramuscularly and intranasally into mice, which were subsequently inoculated with Chlamydia pneumoniae. The chlamydial lung titers of the immunised mice were lower than those of the controls. Thus the 98kDa putative outer membrane protein can be used as a vaccine to provide protection against Chlamydia infections, especially Chlamydia pneumoniae infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC CPNIO0639. The nucleic acids (and their complementary sequences) may be CC cused as diagnostic agents for detecting the presence of nucleic acids CC encoding Chlamydia antigens in samples according to standard methods, CC and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction CC (PCR) assays. Antisense sequences may be used to down regulate CC expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they CC encode according to standard recombinant DNA methodologies. The CC (i.e. as vaccines) for preventing infection by Chlamydia. The CC infections. Chlamydia is a pathogen implicated in the development of CC (for example) community acquired pneumonia, upper respiratory tract CC disease (especially bronchitis and sinusitis, asthmatic bronchitis, CC adult-onset asthma and acute exacerbations of asthma in adults.

                             invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see AAW88411-28), and nucleic acid sequences encoding them (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                               protein Omp8 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see AAXO6820) isolated from a C. pneumoniae expression library. T

                                                                                                                                                                                                                                                                                                                                                                                        This polypeptide comprises the novel 97.6 kDa surface exposed protein Ompl1 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see CC AAX/06823) isolated from a C. pneumoniae expression library. The cinvention provides 12 novel surface exposed proteins, Omp4-Omp15 (2 (see AAW/06823)), and nucleic acid sequences encoding them (see CC AAX/06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for CC pneumoniae. The test comprises detecting antibodies specific for CC pneumoniae. The test comprises detecting antibodies specific for CC membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of CC mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The control of the control

The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AN74584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and sinusitis. It also has an association with atherosclerosis and asthma. The 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
